CARRIER OBJECTIVE

Looking forward to earning the position of **Software Engineer** at a leading organization to showcase my technical skills in programming to generate high performance solutions to general software issues.

EDUCATION

Graduated from Cairo University Faculty of Engineering Computer Engineering Department.
.   *August 2016 - August 2021*

- **Cumulative grade:** Very Good.

- **Graudation project:** Excellent

Graduated from high school (2016): Grade 99 %.

EXPERIECE

- React software engineer at Egyptian armed forces.   (December 2021 – December 2022)
- Team leader at NajahNow company .   (July 2021 – September 2021)
  - Team leader for 40 engineers divided to 4 teams each team worked on different project/website
  - The used stack is (laravel, React and React native)
- Software development engineer at NajahNow company: (July 2020 – March 2021)
  - I have worked in the main platform of the company
  - I have refactored the platform that I have changed the whole **front-end** and about **50%** of the backend
  - I have added some features to the platform such as
    * Quiz system
    * Integrate the platform with online payment (Fawry payment)
    * Integrate the platform with whatsapp
    * Deploying the platform on gcp
    * And some small features
- Computer head at IEEE   (August 2020 – March 2021)
  - Computer head for workshops: {C++, Python, Front-end}
- Back-end instructor at IEEE (best member)   (August 2019 – August 2020)
  - The sessions were about {Php, MySql, PDO}

SKILLS

Web:

· **Back-end** : Laravel, php
· **Front-end** : React, JS (basics, Dom, Bom, ES6), HTML4/5, CSS
· **Database** : SQL, MySQL, MongoDB

Programming

· **Languages:** C++, Python, Java
· **Computer science:** Algorithms, Data structure, Problem solving, OOP, OOD, Design patterns
· **Other:** Regex, Shell script, Command lines, Git & Github, Touch typing(70 wpm)

OS : Linux, Windows   **Languages:** Arabic (Native), English (Very good.)

PROJECTS

- Graduation project - Weather awarness and weather enhancement in autonomus car

    - The idea of the project is to detect the current weather e.g (snowy, rainy, night, foggy etc...) given stream of images from camera, and then enhance this adverse weather

    - The work depended on (Image processing, DL, CNN, GANS)

    - The technologies and languages we used are (Colab, Tensorflow, Keras and python)

- Search engine indexer - using (Java, MySql)   Repo

- Bubble sheet corrector - using (Python, OpenCV)   Repo

- Matchera (Website's API — Back-end) - Using (PHP, Laravel, SQL)   Repo

- OS-Scheduler - Using (C++,Python)   Repo

- OS-Kernal simulator - Using (C++).

- Souq.com application - Using (C# , SQL)

- Question Mark (Website's API — Back-end) - Using (PHP,Laravel)   Repo

    - Note: The free trial of database hosting has ended but you can see the website in this Video
